Dear 

25X1

In regard to the conversation we had on 23 June concerning the parts list, we feel that it should be broken down into two sections: one for you to stock, the other for you to supply to us for our stock.

The primary objective of your stock list should be directed toward being able to construct a complete system (2 units) on two weeks' notice, and, depending on future availability of the components, stock enough parts to service 10 units, regardless of defect, on four weeks' notice, i.e. it is believed that such parts as reflectors and modulators would require a lead time of more than four weeks inasmuch as they are not necessarily stock items. As far as our list of parts that we would like to have is concerned, we can be more specific and state that we would like to have one hundred tungsten lamps, 6 sets of 3 each tripod legs, 3 headphones, 6 battery chargers and 12 extra copies of the instruction and service manual.

It is felt that it should not be necessary to maintain a large stock of readily available parts, for example, standard vacuum tubes, resistors, etc.

I have not yet been able to obtain an answer on the publications problem, but will let you know as soon as an answer is available.

I hope that these terms are agreeable to you.

25X1

Very sincerely,

TSS/APD
